

Front-End Web Certification Rubric

Student Name: Shako T. Okito

	•	
JavaScript	Course No. ITI 481	CRN: 23783

Evaluation Metric	Completed	Not Completed	Recommended Remediation		
Session IX Exercise Projects					
Complete exercise 2.1 – Modification of the Miles Per Gallon ap	plication.				
Understand the modification of this application so the result is displayed in the browser instead of an alert statement.		X	Incorrect Link to Index page.		
2. Link to your solution file.		X			
Complete exercise 2.2 – Modification of the Test Score applicati	ion.				
Understand how the same code can be replaced with less code.		X			
2. Understand the modification of this application so the variable declarations for the three scores parse the entries before storing their values.		X			
3. Understand the modification to change the statements that accumulate the score in the total, so they use the += assignment operator.		X			
4. Link to your solution file.		X			

Evaluation Metric	Completed	Not Completed	Recommended Remediation	
Complete exercise 2.3 – Modification of the Simple application.				
Understand the modification of the Miles Per Gallon application so it gets the length and width of a rectangle from the user, calculates the area and the perimeter of the rectangle, and displays the results in the browser.		X		
2. Link to your solution file.		X		
Session X Exercise Projects				
Complete Exercise 4-1 – Enhance the Miles Per Gallon application	n.			
Understand the modification of the if-else statement that provides the data validation, so it checks each text box separately.		X		
2. Understand the addition of a Clear Entries button below the Calculate MPG button.		X		
3. Understand the modification of the HTML for the Clear Entries button so it has a unique id and an appropriate value attribute.		X		
4. Understand the addition of a function expression named clearEntries() that clears the entries in the four text boxes.		X		
5. Understand the addition of a statement in the onload event handler that attaches the clearEntries() function to the click event of the Clear Entries button.		X		
6. Understand the addition of a statement to the onload event handler that attaches the clearEntries() function to the double-click event of the miles text box.		X		
7. Link to your solution file.		X		

	Evaluation Metric		Not Completed	Recommended Remediation	
Comp	Complete Exercise 4-2 – Build a new Future Value application.				
ci th n b	Inderstand the creation of a function expression named alculateFV(). It should have three parameters that receive he user's entries: investment amount, interest rate, and umber of years. It should calculate the future value assed on these parameter values, round the result to two ecimal places, and return the rounded result.		X		
р	Inderstand the creation of a function expression named rocessEntries() that gets the user entries with no data alidation.		X		
C	Inderstand the code statement that calls the alculateFV() function and stores the result that's returned in the fourth text box.		X		
e cl	Inderstand the creation event handler for the onload vent that attaches the processEntries() function to the lick event of the Calculate button. This handler should lso move the focus to the first text box.		X		
to	Understand the declaration of a variable that will be used o store an error message right after the other variable eclarations.		X		
	Inderstand the if-else statement that tests whether each ntry is valid.		X		
to	Inderstand if an entry is invalid, assign an error message to the variable you declared in step 9 and move the focus to the text box that contains the error. The values for the hree entries should be as follows: a. Investment is a number that's greater than zero and less than or equal to 100,000; b. Interest rate is a number that's greater than zero and less than or equal to 15; c. Years is a number that's greater than zero and less than or equal to 50.		X		

Evaluation Metric	Completed	Not Completed	Recommended Remediation
8. Understand the addition of the another if-else statement that tests whether any errors were detected.			
9. Link to your solution file.		X	
Complete Exercise 6-1 – Experiment with the FAQs application.			
Understand the toggle event handlers		X	
 Understand the className property instead of the hasAttribute(), removeAttribute(), and setAttribute() methods. 		X	
3. Link to your solution file.		X	
Complete Exercise 6-2 – Add controls to the Register application	n.	·	
Add a radio button for Mobile phone and a text area for Comments		X	
2. Understand how to add the JavaScript code that gets the data entered in the two new controls.		X	
3. Understand how to change the code in the JavaScript file so instead of displaying the comments in the table, the length of the comments entry is displayed.		X	
4. Link to your solution file.		X	
Complete Exercise 6-3 – Enhance the Email List application		·	
Enhance the data validation so it displays the error messages in the span elements.		X	
2. Understand how to test application with valid data works.		Х

	X X X X

Evaluation Metric	Completed	Not Completed	Recommended Remediation	
Understand how to add exception handling to the click event handler for the Calculate button.		X		
Understand how to add a throw statement after the if statement in the calculateFutureValue() function.		X		
3. Link to your solution file.		X		
Complete Exercise 14-3 – Enhance the Account Profile application	on.			
Understand how to validate the credit card field.		X		
2. Understand how to validate the expiration date field.		X		
3. Link to your solution file.		X		
Session XII Exercise Projects				
Complete Exercise 16-1 – Enhance the Task List application.				
1. Understand how to code the event handler for the Delete button so it uses the prompt() method to ask the user for the index number of the task to delete, starting with zero for the first task.				
2. Understand how to sort the tasks to make sure their order matches the order of the displayed tasks.		X		
3. Understand how to add data validation to the Delete Task event handler so the user's entry has to be a number and has to be an index value that's in the array.		X		
4. Link to your solution file.		X		
Complete Exercise 16-2 – Enhance the Task List 2.0 application.	,			

Evaluation Metric	Completed	Not Completed	Recommended Remediation
Understand how to code the Filter event handler.		X	
2. Link to your solution file.		X	

Notes:
